

DESIGN CHALLENGE

Provide a bikeway design that meets the project goals for mobility and safety and facilitates placemaking opportunities, while minimizing loss of on-street parking.

DESIGN CONCEPTS

- Protected bikeway on both sides of the street
- Parking on one side of the street
- Flexible placemaking opportunities

DISCUSSION

Implementing this segment of the project using a phased approach would provide a baseline configuration that has the flexibility to evolve and allow the design to be responsive to business preferences – parking, outside seating, landscaping. Hardscape improvements can be implemented over time as the best balance for the street is reached to meet various community needs.
